

Fluorinated Polyether Greases

CHARACTERISTICS

TRIBOLUBE-61 primary characteristics are that it has a very wide temperature range, nonreactive with strong acids, oxygen, fuels, and solvents, extremely low start/run torques at -100°F, and a low evaporation rate, even at temperatures of 550°F. It is an excellent anti-wear, extreme pressure lubricant with long life. Although this lubricant is very inert, newly exposed rubbing surfaces of aluminum and magnesium may react with the greases under certain conditions. Tribolube-61 is available with an extreme pressure additives designated by the

letters MS as well three different corrosion inhibitors designated by the letters RPA, RPB, & RPC. Please consult with an ALI lubrication engineer to select the correct one for your application.

APPLICATIONS

TRIBOLUBE-61 is intended for use in small and large diameter ball, roller, needle, and plain bearings, threads, valves, gears, and screw actuators. It is compatible with most elastomers and plastic seals, gaskets and O-rings.
